

How shell works with kernel

Page No. 2

Eg:-

\$ touch 123 jagam.txt

error: -> command not found

\$ touch

error: touch: missing file operand

try touch --help for more info

\$ touch sunny.txt

\$ us -it

* ... - - - - - sunny.txt

NOTE:- In linux two types of user 1. normal user
2. superuser

\$ -> For normal user

-> For super user (admin/root user)

eg:-

\$ who am i

Jagam moham - - - -> normal user

* to create super user

\$ for normal user

\$ sudo -i

sudo3 password:

\$ for root user

~~##~~ who am i

root

→ root user

~~##~~ exit

logout

\$ who am i

Sagon moham

→ normal user

* \$ and ## varied from lab to lab to

Linux & next operating system.

* some times instead of '\$' is used
!q.!

Online UNIX Terminal

<http://www.masswork.at/psuix>

* It is free ^{unix} terminal and written

in JavaScript.

* we can ~~use~~ access this terminal by any browser like chrome, firefox e.t.c

* we can use this terminal to check very basic command functionality

open terminal \rightarrow alt + ctrl + t

close terminal \rightarrow ctrl + d

very basic commands:-

* some very basic commands are regularly used.

① pwd :- * ~~It~~ ^{present} working directory

* It prints present working directory

eg:-

\$ pwd

/home/mohan

② ls :-

* list the all files and directories

eg:-

\$ ls

= text classes

③ mkdir :-

* to create a new directory (folder)

eg:-

\$ mkdir textclasses

④ cd :-

* change directory

eg:-

\$ cd textclasses

\$ pwd
home/mohan/textclasses

5. touch :- to create any empty file

eg:-

\$ touch notes.txt

\$ ls

notes.txt

6. rm :-

* to remove a file or
directory

\$ rm notes.txt

\$ ls

→ nothing

7. rmdir :-

* To remove directory

* rmdir is applicable only
for empty directory.

* If directory is non empty
we get error

9. date :- * to display current system

* date and time

eg:- \$ date

sat, 29 Dec 2019 14:04:21

10. cal :-

* to display current month
calendar

* eg:- \$ cal

Dec 2019						
S	M	T	W	Th	Fr	S
1	2	3				

* to display ^{specified} ~~date~~ month
calendar

* eg:- \$ cal 11 2019
 ↑
 month

November 2019						

eg: \$ cal 2020 → It is not work in
online terminal

* \$ cal 2020 → local machine terminal
* enter 2020 calendar
displayed.

2020

\$ cal 9999

9999

* 9999^{year} cal will ~~displayed~~ ^{displayed}

\$ cal 1

1

* 1st ^{year} ~~year~~ cal displayed

* \$ cal 10000

cal: year 10000 not in range 1-9999

10. help

To display list of all
commands

\$ help

alias

Set an alias

cal

calendar

11. hello - To display brief system information

eg: \$ hello

12. clear - * To clear terminal (cmd + c)

eg: \$ clear

13. exit - * To logout current session

(a)
eg: To exit terminal
\$ exit

Summary of Day 02 -

1. pwd

2. \$

3. mkdir

4. cd

5. touch

6. rm

7. ~~mkdir~~ rmder

8. date

9. cal

10. help

11. hello

12. clear

13. exit
